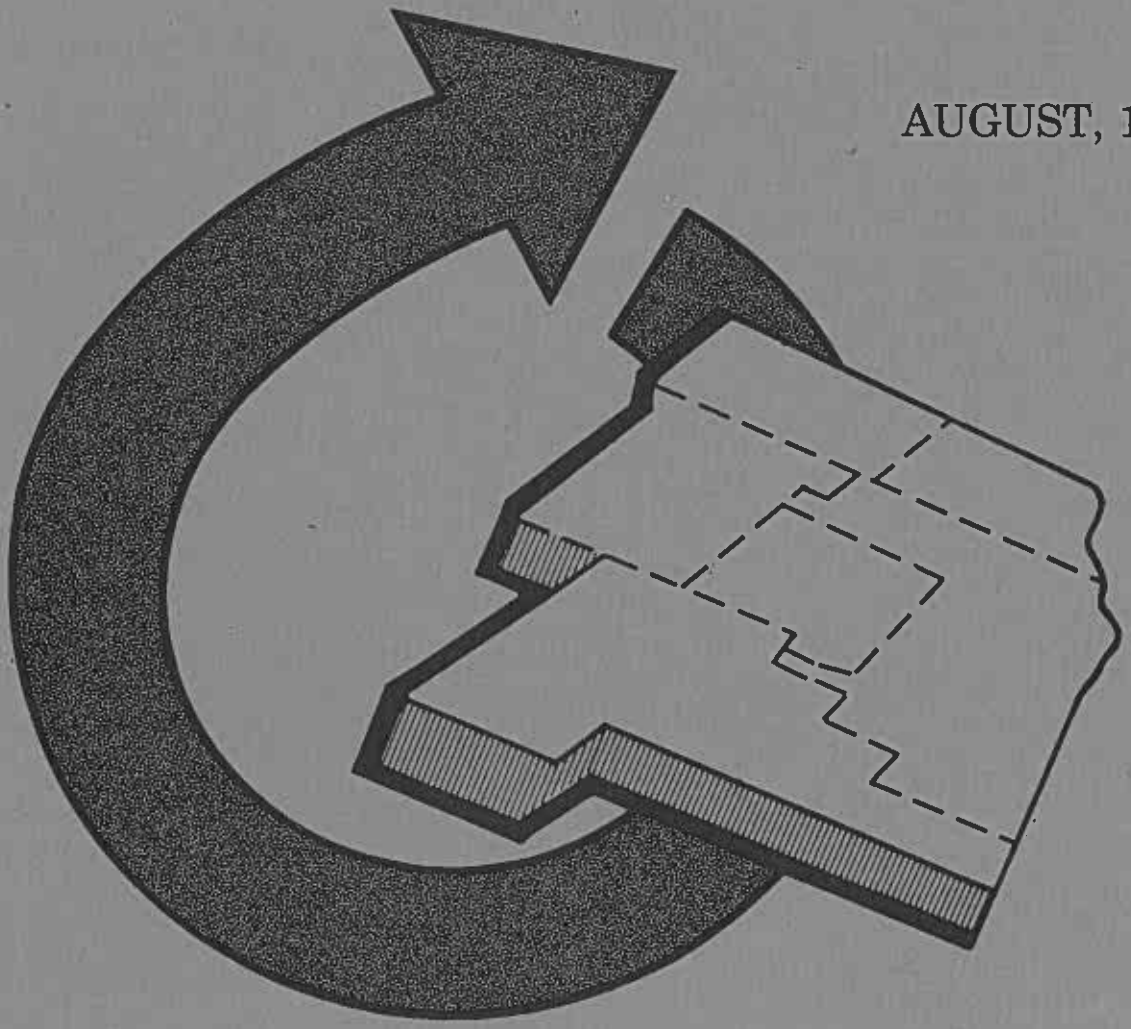
1990 CENSUS LABOR FORCE AND OTHER WORK RELATED CHARACTERISTICS FROM SUMMARY TAPE FILE 3A

Northeastern Illinois Municipalities, Counties, Township and Chicago Community Areas

AUGUST, 1994



NORTHEASTERN ILLINOIS PLANNING COMMISSION

Northeastern Illinois is diverse in its land use and complex in its political structure. It has some of the most productive farms on earth — also one of the world's greatest cities. It contains 3,714 square miles of land and 38 square miles of water. It is home to 7 million people, organized in more than 1,250 units of government.

In 1957, following a decade of rapid urbanization in the Chicago suburban area, the Illinois General Assembly created the Northeastern Illinois Planning Commission (NIPC) to conduct comprehensive planning for the six-county greater Chicago region.

The Commission has three statutory charges: conduct research and collect data for planning; assist local government; and prepare comprehensive plans and policies to guide the development of the counties of Cook, DuPage, Kane, Lake, McHenry and Will.

By necessity, regional planning deals with general development policies not local land use detail. NIPC supports and coordinates county and municipal planning. The Commission has advisory powers only and relies upon voluntary compliance with its plans and policies.

DATA BULLETIN 94-1
1990 CENSUS – LABOR FORCE STATUS AND OTHER WORK-RELATED CHARACTERISTICS FROM SUMMARY TAPE FILE 3A FOR NORTHEASTERN ILLINOIS MUNICIPALITIES, COUNTIES, TOWNSHIPS AND CHICAGO COMMUNITY AREAS

INTRODUCTION

This Data Bulletin presents labor force and other work-related characteristics by place of residence extracted from the 1990 Census Summary Tape File 3A (STF 3A). The data include labor force statistics by race and Hispanic origin as well as information on occupational employment, work disability, educational attainment, place of work, and means of transportation to work. The geographic area covered is northeastern Illinois, including 6 counties, 115 townships, 263 municipalities, and 77 Chicago Community Areas. Two companion Data Bulletins, 93-3 and 94-2, contain, respectively, selected income and poverty characteristics from STF 3A.

The purpose of this publication is to report 1990 Census STF 3A labor-related data for the area's major political units of geography to a broad audience of users. The bulletin excludes information for census tracts and block groups. The Northeastern Illinois Planning Commission (NIPC) can, however, prepare comprehensive 29-page social and economic profiles from STF 3A for each county, township, municipality, census tract, block group, ZIP Code, and Chicago community area in northeastern Illinois. These STF 3A reports are available at cost: $25 for the first report, $15 for each additional one. NIPC subscribers, of course, receive a 20% discount. Users interested in learning about the full range of demographic data available from STF 3A and all other 1990 Census sources should contact NIPC's Research Services Department at 312-454-0400.

The remainder of this text provides definitions and cautions concerning the data presented in the tables. Most of what follows is an edited version of Census Bureau documentation.

ACCURACY OF THE DATA

Sampling Error

Data contained in STF 3A are estimates, based on questionnaires distributed to only a sample of the housing units in any specific area. These questionnaires contained 45 more questions than the basic "short form" 14 question survey distributed to all housing units.

The "long form" questionnaire, tabulated on STF 3A, was mailed out, on average, to one of every six housing units. In governmental jurisdictions with an estimated population of fewer than 2,500 people in 1988, one out of every two housing units was sampled. Except in the most populated census tracts where the rate was one in eight, the sampling rate in other jurisdictions was one in six. *Data in this bulletin are the Census Bureau's estimates of the actual figures that would have resulted if the questionnaire had been distributed to all housing units.*

Because the data are based on a sample they are subject to sampling error (i.e., the difference between actual values and the values derived from a sample). Based on a one in six sample, the following guidelines could be used to assess the impact of sampling error:

There is about a 5 percent probability that an estimated value of 10,000 persons or households with a particular characteristic shown in a table in this data bulletin actually represents a value of less than 9,560 or more than 10,440. The interval becomes proportionately wider as the estimated value drops. The comparable confidence interval for an estimated value of 1,000 is 860 to 1,140. For a value of 100, the interval is 56 to 144.

For all practical purposes, an estimated value of less than 100 should be considered only a very approximate indication of the actual number. Zero does not indicate that there are no people with a particular characteristic, but merely that none showed up in the sample.

Confidentiality Edit

As in previous census counts, the Census Bureau is committed to preserving the confidentiality of individual responses. In the 1980 Census, certain data items were suppressed so that it would not be possible to identify specific individuals or households. For this Census there is no suppression in the sense that selected data cells are left blank. Of course, for sample data, the sample itself provides adequate protection against the disclosure of information about specific individuals, households, or housing units. For the smaller geographic areas for which sample data are available, however, a confidentiality edit is applied. The edit is conducted by selecting a small subset of households from the sample files and blanking a subset of the data items on these records. Responses to these items are then imputed using the same procedures that are used for imputing inadequate responses or non-responses (see discussion of imputation below). Confidentiality is thus maintained because users can never be sure whether tabulated information is completely accurate. According to the Bureau, "the editing process is implemented in such a way that the quality and usefulness of the data were preserved."

Imputation Procedures

Often respondents may fail to answer all the questions on the Census questionnaire or may answer certain questions inconsistently. In such cases remaining after the Bureau's field operations have been completed, the Census Bureau edits the data by assuming that the proper responses would have been identical to those of a previously processed and statistically similar household or individual for whom more complete information is reported. In some cases, no responses were provided for an individual or housing unit. In these instances, an entire set of characteristics is "substituted" for the missing record by repeating an earlier, complete record. Many individuals who may now claim they were never counted, in fact, may have been counted in this manner.

Count Corrections

In July 1991 the U.S. Department of Commerce decided not to adjust the enumerated totals to correct for possible undercounts or overcounts. Chicago then joined with 17 other major cities in suing the U.S. Department of Commerce for undercounting minority populations. In August 1994, the U.S. Court of Appeals in Manhattan ruled that the government had failed to justify a census that undercounted Blacks and Hispanics. As of the date of this publication, the question of an undercount has not been resolved. The Clinton Administration could choose to accept the ruling outright and immediately modify the population figures, or it could choose to appeal the ruling to the U.S. Supreme Court or return the case to a lower court to present further arguments. Any adjustments to census data for the city of Chicago and the rest of northeastern Illinois that may result from this decision are not included in this publication.

IMPORTANT DEFINITIONS

Race

The concept of race as used by the Census Bureau reflects self-identification rather than any clear cut scientific definition of biological stock. The racial categories used in the 1990 Census were White; Black; American Indian, Eskimo, or Aleut; Asian or Pacific Islander; and Other Race. The Census Bureau classifies Hispanics as an ethnic rather than racial group; therefore, persons of Hispanic origin may be of any race.

Reference Week

For labor force and other work-related census data, the reference week referred to the full week prior to the week respondents completed the questionnaire or were interviewed by an enumerator.

Labor Force and Unemployment

Labor force data measure employment (and unemployment) by place of residence rather than by place of work. Persons 16 years of age or older were defined as in the civilian labor force if (1) they worked at any time during the reference week, (2) had jobs but were temporarily absent during the reference week, (3) were on layoff, or (4) did not work but were looking for work during the last four weeks and were available to work during the reference week. Individuals in the civilian labor force but neither at work nor temporarily absent from work were classified as unemployed. The total labor force is defined as the civilian labor force plus members of the U.S. Armed Forces on active duty.

Work Disability Status

Persons were identified as having a work disability if they had a health condition, either physical or mental, that had lasted for 6 months or more and limited the kind or amount of work they could do at a job or business.

Mobility Limitation Status

Persons were identified as having a mobility limitation if they had a health condition, either physical or mental, that had lasted for 6 or more months and made it difficult for them to go outside the home alone.

Place of Work, Means of Transportation to Work

The place of work and means of transportation to work data were based upon work trips made and destinations reached during the reference week. Tabulations only indicate work places and means of getting to work for individuals who were both employed and at work during the reference week. These data, in excluding individuals who were temporarily absent from work, therefore understate the total employment in any geographic area.

Persons who worked at more than one location during the reference week were asked to report the location at which they worked the greatest number of hours. Similarly, persons were asked to report their principal means of transportation to work. In cases where different means were used on different days, respondents were to indicate the means used the most often. In cases where more than one means was used on a work trip, persons were asked to report the means used for the longest distance.

Occupational Employment

For employed persons, the occupational data refer to the person's job during the reference week. For those working two or more jobs, the data refer to the one at which the person worked the greatest number of hours.

The occupational classification system used for the 1990 Census consisted of 500 specific occupational categories that were collapsed into 6 summary and 13 major occupational groups. This classification was developed to be consistent with the Standard Occupational Classification (SOC) Manual: 1980, published by the Office of Federal Statistical Policy and Standards within the U.S. Department of Commerce. The 13 major occupational groups found in Table 6 of this data bulletin are as follows:

(1) executive, administrative, and managerial occupations
(2) professional specialty occupations
(3) technicians and related support occupations
(4) sales occupations
(5) administrative support occupations, including clerical
(6) private household occupations
(7) protective service occupations
(8) service occupations, except protective and household
(9) farming, forestry, and fishing occupations
(10) precision production, craft, and repair occupations
(11) machine operators, assemblers, and inspectors
(12) transportation and material moving occupations
(13) handlers, equipment cleaners, helpers, and laborers.

Educational Attainment

For persons 25 years old and over, attainment is based on the highest level of school completed or the highest degree received. Persons in that age group still enrolled in school were instructed to report the level of the previous grade attended or the highest degree so far received. Persons not reporting educational attainment on the Census questionnaire were assigned the attainment of someone of the same age, race or Hispanic origin, and sex residing in the same or nearby area. Persons filling in more than one attainment circle were assigned to the highest level or degree reported.

Additional Definitions

The best source of additional information concerning census concepts, definitions, conventions and historical comparability is the Census Bureau's *Census of Population and Housing, 1990: Summary Tape File 3 Technical Documentation.* Call the Data User Services Division, Customer Services Division, Bureau of the Census, Washington, D.C. at 301-457-4100.

GEOGRAPHIC AREAS

Places are incorporated municipalities. Boundaries for many places have changed between 1980 and 1990 due to annexations, detachments, mergers, or disincorporations. No data is shown for the villages of Lily Lake, Virgil, and Volo because these places incorporated after the 1990

Census was taken. The municipalities of Diamond, Godley, Maple Park, Montgomery, and Minooka are partly inside and partly outside of northeastern Illinois; the data herein includes all parts of these communities.

Minor Civil Divisions are essentially equivalent, in northeastern Illinois, to political townships. Some MCDs are coextensive with municipalities of the same name, such as Evanston and Oak Park. Others, however, cover areas quite different from their namesake municipalities; for example, Niles Township includes only part of the village of Niles, but does include all or part of several other municipalities, as well as unincorporated areas.

Chicago Community Areas are areas within the city of Chicago which are commonly used for statistical purposes. In most cases, they are comprised of groups of census tracts that are consecutively numbered. In this publication, Community Areas reflect aggregates of whole tracts. Because some census tract boundaries within Chicago have changed between 1980 and 1990, there may be some changes in Community Area boundaries.
